

Closure Systems

ONE-SEAL-LID

The lightweight, smart and fully recyclable solution.

RESEALABLE.
REUSABLE. RECYCLABLE.

The lid to peel, seal and re-use for an all-round mono-material solution.

When designing dairy packaging that is resealable, extends shelf life and has a positive impact on our environment, we say 'it takes two to tango'. We believe as much attention should be paid to the lid as is to the cup – to always keep yoghurt fresh and flavourful. At SwissPrimePack, we are committed to providing our customers with the benefit of fully recyclable, sustainable packaging.

SWPP has developed a two-in-one sealing lid that is designed to provide the perfect re-closable functionality to its corresponding packaging. This unique solution also replaces the use of non-resealable aluminium whilst consisting of 40% less plastic compared to other alternatives. The ONE SEAL LID is applicable to any type of packaging that is direct-printed, sleeved, or designed as a cardboard-plastic-combination. The overall packaging solution is cost-efficient and fully recyclable when sourced from mono-material. Both lid and cup are available either in PP, PET, or in their bio-circular ISCC certified versions.

Most impressive is that this "snap-in" lid seals so tightly after being opened for the first time that it can be reused until the cup is empty and disposed of together. Smart and convenient.

THE
PERFECT
DUO
made from
mono-material.

ONE-SEAL-LID

The lightweight, smart and fully recyclable solution.

FEATURES AND BENEFITS

Technical Information

- 95mm diameter (standard/normed size)
- sealable, peelable
- sterilisable, pasteurisable
- available in rPET / PET, rPP / PP or compostable material
- available in transparent, unicolour or decorated
- optional barrier layer for more shelf life
- available in variety of formats & geometries
- applicable by simple heat sealing technology
- end-to-end solution of lid & cup for precise compatibility

Our Strengths

- + modern production facilities
- + expertise in plastics and alternative materials
- + in-house tool and mould construction
- + creative and innovative tool design
- + cost-efficient, as from small quantities
- + sustainable creating by Eco Design
